Lucy Jane Bledsoe writes about the intersection of wilderness, family, and survival. Her titles include novels for both adults and kids.

She has told many stories during her career as an author, communicating successfully with a range of readers. Her fiction incorporates scientific themes and inquisitive characters of middle-school age and has earned endorsement by teachers, parents and, perhaps more importantly for our pool of future scientists, by the young readers themselves.

Bledsoe’s work has won many awards, including a 2002 California Arts Council Individual Artists Fellowship in Literature, a PEN Syndicated Fiction Award, a National Endowment for the Humanities Youth grant, a Barbara Deming Memorial Money for Women grant, a Puffin Foundation grant, and two National Science Foundation Artists & Writers in Antarctica Fellowships.

Available: December 8th to visit between 10 am - 5 pm

Mary M. Cerullo describes herself as a "science interpreter." The author of a dozen children's books on the ocean, she was named Outstanding Marine Educator of the Year in 1992. Cerullo is currently the communications coordinator for the Maine Mathematics and Science Alliance and works with parents, educators, and community groups on science and math education reform. She's managing director of programs for Friends of Casco Bay. In addition to her books for children, she's also authored Reading the Environment: Children's Literature in the Science Classroom, a teacher's handbook (1997).
